ABSTRACT

Aloe vera is a wonder plant with health benefits so myriad and astounding that hardly any part of human body remains uninfluenced by its healing touch. It acts as a natural fighter against all sorts of infection, an efficient anti-oxidant, helps in treating all digestion related problems, heartburn, arthritis, stress, diabetes, rheumatism pain, asthma, cancer, AIDS. It also acts as a laxative, beauty enhancer and studies have shown that it has an effect on lowering blood sugar levels in diabetics. Aloe has been proved to be a plant of amazing medicinal properties through researchers. The medicinal value of the plant is recognized since centuries because of the gel like pulp obtained by peeling its leaves. Its juice has cooling properties, is anabolic in action, a fighter of ‘pitta’, storehouse of phytochemicals and guards against fever, skin diseases, burns, ulcers, boils eruptions etc. Commercially, aloe can be found in pills, sprays, ointments, lotions, liquids, drinks, jellies, and creams, to name a few of the thousands of products available. In the present scenario, the aloe industry is blooming but the consumers are misguided leading to unfavourable outcome due to reasons like unawareness about its proper and adequate medicinal and health value, improper marketing and unavailability of processing units at farmer’s level, misleading hyped advertisement in cosmetic and health products. So, there is a burning need to educate about the importance of Aloe vera for human race and popularize it for greater interest.

Keywords: Aloe vera, Antioxidant, Laxative, Anticancer, Antidiabetic, Phytochemicals.

INTRODUCTION

General description of Aloe vera

Aloe vera is a hardy, perennial, tropical, drought-resistant, succulent plant belonging to the Liliaceae family which, historically has been used for a variety of medicinal purposes. It has a vast traditional role in indigenous system of medicine like ayurveda, siddha, unani and homeopathy. Clinical evaluations have revealed that the pharmacological active ingredients are concentrated in both the gel and rind of the Aloe vera leaves. Aloe vera is a stem less or very short-stemmed plant growing to 60–100 cm height, spreading by offsets. Mature plants can be grown as tall as four feet with average height around 26-28 inches. Each plant has 12 to 16 leaves usually and weighs up to 2-3 kg on maturity. The plants can be harvested after every 6 to 8 weeks by removing 3-4 leaves per plant. It produces erect unbranched flowering stalks in the second year in winter season, which grows 90-150 cm tall. It bears bright yellow and orange flowers, which are arranged in auxiliary spike. It bears thick fleshy leaves in rosette, which gives it a distinct appearance. The leaves are green to grey-green, with some varieties showing white flecks on the upper and lower stem surfaces. The margin of the leaf is serrated and has small white teeth. The flowers are produced in summer on a spike up to 90 cm height, each flower pendulous, with a yellow tubular corolla 2-3 cm long. Like other Aloe species, Aloe vera forms arbuscular mycorrhiza, a symbiosis that allows better access of the plant to mineral nutrients in soil.

Distribution of Aloe vera

Aloe vera is popularly known as Aloe barbadensis by taxonomists. It is being used since 1750 BC by Mesopotamians and Egyptians. The Arabic word aloeh means shining and bitter. The virtues of Aloe vera have been recorded for thousands of years by many ancient civilizations including Egypt, Persia, Greek, India and Africa. The genus is indigenous to African continent and Mediterranean countries, such as Greece and Southern Italy. It is reported that it grows wild on the islands of Cyprus, Malta, Sicily, the Canary Cape, Cape Veroe and have spread over arid tracts of India. Out of the 275 species, 42 of them belong to Madagascar region (Africa), 12-15 to Arabian Peninsula and rest are distributed over tropical South Africa. In India, only 4 species (Aloe forbesii, Aloe inermis, Aloe ferox and Aloe barbadensis) are reported to occur and of these Aloe barbadensis is the most widely distributed species. These taxa comprises of several varieties, viz., officinalis, chinesis, litoralis and their cross. The species has a number of synonyms: A. barbadensis Mill., Aloe indica Royle, Aloe perfoliata L. var. vera and A. vulgaris Lam. and common names including Chinese aloe, Indian aloe, True aloe, Barbados aloe, Burn aloe, First aid plant. The species name vera means “true” or “genuine”. Some literature identifies the white spotted form of Aloe vera as Aloe vera var. chinesis. However, the species varies widely with regard to leaf spots and it has been suggested that the spotted form of Aloe vera may be nonspecific with A. massawanda. The species was introduced to China and various parts of southern Europe in the 17th century. The species is widely naturalized elsewhere, occurring in temperate and tropical regions of Australia, Barbados, Belize, Nigeria,
Paraguay and the US. It has been suggested that the actual species distribution is the result of human cultivation and that the taxonomy could be doubtful too.

**Nutritional properties of Aloe vera**

An analysis of Aloe vera reveals some of the magic behind its miraculous healing powers. The plant contains a multitude of essential vitamins and minerals such as: Vitamins A, B1, B2, B3, B6, B12, C, E, folic acid, choline, calcium, phosphorous, potassium, iron, sodium, magnesium, manganese, copper, chromium, and zinc. Aloe also contains a wealth of amino acids: isoleucine, leucine, lysine, methionine, phenylalanine, threonine, valine, aspartic acid, glutamic acid, alanine, arginine, cystine, glycine, histidine, hydroxyproline, proline, serine, and tyrosine. It produces at least 6 antiseptic agents which kill or control mold, bacteria, fungi and viruses: Lupeol, salicylic acid, urea nitrogen, cinnamonic acid, phenols and sulfur. Lupeol and salicylic acid are known as effective painkillers. Aloe also contains three anti-inflammatory fatty acids: cholesterol, campesterol and β-sitosterol (plant sterols). These agents are the source for aloe’s effectiveness in treating all kinds of internal and external inflammations including burns, cuts, scrapes, acid indigestion, ulcers and other inflammations of the liver, kidney, colon and pancreas, among others. Additionally, β-sitosterol is a powerful agent in helping to lower bad cholesterol levels. Finally, aloe contains at least 23 polypeptides (immune stimulators), which can help to explain aloe’s potency in helping to control a broad spectrum of immune system diseases. Free monosaccharides consisted of D-mannose and D-glucose in a molar ratio of 5:4 and trace amounts of xylose, rhamnose, galactose and either arabinose or fucose was found. Mannose 6 phosphate is a major sugar component in Aloe vera. Aloe vera contains 75 potentially active constituents: vitamins, enzymes, minerals, sugars, lignin, saponins, salicylic acids and amino acids.

Additional minerals found in Aloe vera include copper (important for red blood cells, skin and hair pigment), iron (involved in oxygen transportation and making of hemoglobin in red blood cells), potassium (helps in fluid balance), phosphorus (helps in building bones and teeth, assists in metabolism and maintains body pH) and sodium (regulates body liquids, helps in nerve and muscle performance, and helps in delivering nutrients to body cells). Aloe vera also contains the trace minerals rhodium and iridium used in cancer and tumor research experiments. Another component of Aloe vera consists of the lignins, a major structural material of cellulose content that is helpful for penetrative properties and beneficial for skin problems such as eczema and psoriasis. Aloe vera, an anti-oxidant rich plant, contains vitamins such as A, C and E acting as natural antioxidant along with the minerals zinc and selenium. Anti-oxidants help boost the immune system and combat free radicals in the body. These free radical fighters get rid of the toxins and carcinogenic elements in human bodies from the pollution and poor quality foods.

**Phyto-chemical properties of Aloe vera**

The aloe plant contains flavonoids, terpenoids, lectins, fatty acids, cholesterol, anthraquinones, chromones (8-C-glucosyl-7-O-methylaloeiodiol, 8-C-glucosyl-noreugenin, isoaloeresin-D, iso-raibachromone, nealoesin-A) monon and polysaccharides (pectins, hemicelluloses, glucomannan, acemannan and mannose derivatives), tannins, sterols (lupeol, campesterol and β sitosterol), salicylic acid, organic acids, enzymes, saponins, vitamins, minerals, aloin, anthrone, aloemodin (3-hydroxymethyl-chrysasin), aloetinic acid, choline and choline salicylate, complex mucopolysaccharides similar to hyaluronic acid, sapogenins and enzymes such as catalase, amylase, cellulase and alliinase.
Aloe vera leaves contain a range of biologically active compounds, the best studied being acetylated manannans, polymannans, anthraquinone C-glycosides, anthrones and anthraquinones, and various lectins. The ten main areas of chemical constituents of Aloe vera include: amino acids, anthraquinones, enzymes, minerals, vitamins, lignins, monosaccharides, polysaccharides, salicylic acid, saponins, and sterols. It is also reported that the main enzymes found in Aloe vera include amylase (breaks down sugars and starches), bradykinase (stimulates immune system, analgesic, anti-inflammatory), catalase (prevents accumulation of water in the body), cellulase (aids cellulose digestion), lipase (aids fat digestion), oxidase, alkaline phosphatase, proteolytiase (hydrolyses proteins into their constituent elements), creatine phosphokinase (aids metabolism), and carboxypeptidase. Other constituents of Aloe vera would include prosta glandins, tannins, magnesium lactate, resins, mannins, proteins such as lectins, monosulfonic acid and gibberellins.

**MEDICINAL PROPERTIES**

"Let food be your medicine and medicine be your food—Hippocrates"

Aloe vera has been used for medicinal purposes in several cultures for millennia: Greece, Egypt, India, Mexico, Japan, and China. The Egyptians used the Aloe vera to make papyrus like scrolls as well as for treatment of tuberculosis. Various preparation of Aloe barbadensis like confection, lotion and juice are useful remedies for curing various disease. Aloe contains mixture of glucosides collectively called ‘aloin’ which is the active constituent of various drugs. Indian aloe (Aloe barbadensis) is a rich source of over 200 naturally occurring nutrients such as vitamins, minerals, sugars, amino acids, enzymes and acids, which helps in digestion system. The peeled, fresh and preserved gel is used to treat inflamed eyes, skin inflammations of sores and burns. The healing properties of Aloe vera are due to the presence of aloecin B, which stimulates the immune system. The products (Aloe vera juice, Aloe vera jelly, Aloe vera pickle, Aloe vera sarbat, Aloe vera gel, Aloe vera glicerin, Aloe vera body lotion, Aloe vera shampoo, Aloe vera fairness cream, Aloe vera hair gel, Aloe vera pimple gel etc.) prepared from aloe leaves have multiple properties such as emollient, purgative, anti-bacterial, anti-oxidant, anti-fungal, anti-septic and cosmetic. The Food and Drug Administration of the USA has approved the developmental study of Aloe vera for the treatment of cancer and AIDS. This is attributed to the anti-viral and immune modulating properties of acemannan. Traditionally aloe is extensively used in treating urine related problems, pimpls, ulcers etc. It is also used in gerontology and rejuvenation of aging skin. The juice of Aloe vera leaves is used as stomachic tonic and purgative.

Scientific evidence for the cosmetic and therapeutic effectiveness of Aloe vera is limited and when present is frequently contradictory. Despite this, the cosmetic and alternative medicine industries regularly make claims regarding the soothing, moisturizing, and healing properties of Aloe vera, especially via internet advertising. Aloe vera gel is used as an ingredient in commercially available lotion, yogurt, beverages, and some desserts. The bio active compounds are used as astringent, haemostatic, anti diabetic, anti-ulcer, anti-septic, antibacterial, anti-inflammatory, antioxidant and anticancer agent also, effective in treating stomach ailments, gastrointestinal problems, skin diseases, constipation, radiation injury, wound healing, burns, dysentery, diarrhoea and in the treatment of skin diseases. Currently the plant is widely used in skin care, cosmetics and as nutraceuticals. Ghulkumari is described as multi functional herb in Ayurveda as blood purifier, anti inflammatory, diuretic, uterine tonic, spermaticogentic, laxative and fever reliever. It is used in ayurvedic formulations as appetite-stimulant, purgative, emmenogogue and antihelminthic, for treating cough, colds, piles, debility, dyspnoea, asthma and jaundice. Co-treatment with Aloe vera was effective in reducing genotoxicity of the direct-acting mutagen. As a drink it protects the mucous membrane of the stomach especially when irritated or damaged. A vera juice is considered helpful for relieving many types of gastrointestinal irritation and juice products are widely available. Aloe vera act against various micro-organisms and increases in total white blood cell count and macrophages. In acute gastric mucosal lesions, the extract dose dependently inhibits gastric acid secretion and provides gastro protective activity. Aloe vera contains salicylic acid which is an aspirin-like compound with anti-inflammatory, analgesic and anti-bacterial properties. It has anti-pyretic properties for reducing fevers.

Another constituent of Aloe vera includes saponins. These are soapy substances from the gel that are capable of cleansing and having antiseptic properties. The saponins perform strongly as anti-microbial against bacteria, viruses, fungi and yeasts. The plant sterols or phyto-steroids in Aloe vera include cholesterol, campesterol, lupeol, and β-sitosterol. The plant steroids have fatty acids in them that have antiseptic, analgesic, and anti-inflammatory properties. Aloe vera contains properties such as: astringent (causing a contraction of the skin, blood vessels, and other tissues stopping the fluid discharge), emollient (helps to soften and smooth the skin), antifungal (destroys fungi), and cell proliferant (quickly regrows new cells) used to heal wounds and burns.

Generally aloe juice is a good tonic for skin and digestive disorders. The enzymes in Aloe vera will improve digestion and nutrient absorption. It will help bring the body to a pH balance while being beneficial to the whole gastro-intestinal system. Aloe vera soothes indigestion, IBS, colitis and stomach acidity. Aloe vera juice aids the digestion and absorption of nutrients, helps control blood sugar, increases energy production, promotes cardiovascular health, improves liver function, and boosts...
the immune system. The pulp is used extensively in Siddha medicines for treating constipation, enlargement of spleen, zymotic disease and chengamaar. The plant was more active as a gastroprotective agent at lower concentration against mucosal injury.

*Aloe vera* was evaluated on the mycelium development of *Rhizoctonia solani*, *Fusarium oxysporum*, and *Colletotrichum coccodes*, that showed an inhibitory effect of the pulp of *A. vera* on *F. oxysporum* at 104 µl 1–1 and the liquid fraction reduced the rate of colony growth at a concentration of 105 µl 1–1 in *R. solani*, *F. oxysporum*, and *C. coccodes*. It is also reported that the aloe juice have anti-inflammatory, anti-arthritis activity, antibacterial and hypoglycaemic effects. For bacteria, inner-leaf gel from *Aloe vera* was shown to inhibit growth of *Streptococcus* and *Shigella* species in vitro. The aloe gel inhibited the growth of *Trichophyton mentagrophytes* (20.0 mm), while the leaf possesses inhibitory effects on both *Pseudomonas aeruginosa* and *Candida albicans*. In contrast, *Aloe vera* extracts failed to show antibiotic properties against *Xanthomonas* species. Other uses for extracts of *Aloe vera* include the dilution of semen for the artificial fertilization of sheep, used as fresh food preservative and used in water conservation in small farms.

**Aloe vera improves digestive system**

*Aloe vera* juice is useful to treat gastric intestinal problems like indigestion, candida, colitis and relief from digestive issues such as heartburn and irritable bowel syndrome, although it bears significant potential to be toxic when taken orally. Constipation, diarrhea, indigestion, irritable bowel syndrome etc. are cured by the flushing action of *Aloe vera* juice. The deposits of toxins and un-wanted substances in our diet keeps on accumulating in intestine and prevent the absorption of essential nutrients causing nutritional deficiency, lethargy, constipation, and low back ache. Aloe juice helps to flush out these residues boosting the digestion and gives a greater feeling of well being. A. vera gel and leaf is used to relieve many types of gastrointestinal irritations. Preliminary studies have suggested oral *Aloe vera* gel may reduce symptoms and inflammation in patients with ulcerative colitis. The anti-inflammatory actions of *Aloe vera* gel in vitro provide support for the effect in inflammatory bowel disease. The dried juice is an important ingredient of a large number of Ayurvedic preparations, particularly for treating disease associated with the digestive system.

**Aloe vera helps to heal wounds**

Wound healing is a dynamic process, occurring in 3 phases. The first phase is inflammation, hyperaemia and leukocyte infiltration. The second phase consists of removal of dead tissue. The third phase of proliferation consisting of epithelial regeneration and formation of fibrous tissue. *Aloe vera* is often called the "Natural healer". Aloe gel is excellent for healing first degree burns, relieves inflammation and accelerates healing. The aloe gel stimulates cell division due to presence of wound healing hormones. *Aloe vera* gel has anti-bacterial, anti-fungal, anti-viral and antiseptic properties and helps to heal minor wounds. *Aloe vera* juice when taken orally enhances immunity and increases cell repair capacity by inhibiting infestation of micro-organisms. It reduces painful effects of shingles, reduces symptoms of psoriasis and eases heartburns and ulcers. *Aloe vera* has high water content (96%). This prevents wound desiccation and increases migration of epithelial cells. The microcirculation of wound is enhanced by aloe, through increasing oxygenation. The catecholamines have wound retardant effect. Aloe blocks action of catecholamines, thus increases epithelisation. *Aloe vera* increases vascularisation of the wound, which removes the dead tissue and makes wound healthy. Aloe may also increase cross linking of collagen and collagenisation by stimulating macrophage cytokine production and acemannan acts as a macrophage stimulator. *Aloe vera* may also block some wound healing inhibitors like sterols and amino acids through the growth factors present in it. The ascorbic acid in *Aloe vera* enhances the synthesis of collagen and counter balances collagen breakdown. Further studies have shown that *Aloe vera* is used for treatment of herpes simplex infection, lichen planes, gingivitis. The healing effect of aloe results from its ability to prevent injury to epithelial tissues, and promote healing of injured tissues.

Aloe gel is perhaps the most widely recognized herbal remedy in the United States today; it is used to relieve thermal burn, sunburn and promote wound healing. It is also effective in wound healing due to the presence of some components like anthraquinones and hormones, which posses antibacterial, antifungal and antiviral activities. Evidence on the effects of its sap on wound healing, however, is limited and contradictory. Some studies, for example, show that *Aloe vera* promotes the rates of healing, while, in contrast, other studies show that wounds to which *Aloe vera* gel was applied were significantly slower to heal than those treated with conventional medical preparations. A more recent review concludes that the cumulative evidence supports the use of *Aloe vera* for the healing of first to second degree burns and helps to remove skin disorders of all kinds due to anti-bacterial, anti-viral, and analgesic properties. The anthraquinones in *Aloe vera* breakdown residue, pus and lifeless cells, bring blood to the region and flush out material from the wounds and ulcers. It is also used in variety of skin ailments such as mild cuts, insect stings, bruises, poison ivy and eczema. It has antibacterial and antifungal qualities, and increases blood flow to wounded areas. It stimulates fibroblasts, the skin cells responsible for wound healing and the manufacture of collagen, the protein that controls the aging process of the skin and wrinkling. *Aloe vera* is now widely used on face tissues, where it is promoted as a moisturizer and anti-irritant to reduce chafing of the nose of users who suffer hay fever or cold.
Aloe vera protector of human immune system

Aloe vera helps to improve immunity and protects heart, brain and other vital organs of body. The whole leaf extract galvanizes the cells of immune system. The phagocytes of human body increase their scavenging activities, thus cleaning the body and giving a whole cascade of protective actions, which strengthen immunity. Aloe vera, a great immune stimulant, contains 90 per cent rhodium and iridium (trace minerals) in the acemannan which is one of the polysaccharides which dramatically increases the white blood cells or macrophages and T cells.

The most important are the long chain polysaccharides, comprising glucose and mannose, known as the glucosmannans. The polysaccharides are absorbed completely and appear in the blood stream unchanged hence they act as immunomodulators. The bitter aloes consist of free anthraquinones and their derivative: barbaloin, aloe-emodin-9-anthrone, isobarbaloin, anthrone-C-glycosides and chromones. In large amounts these compounds exert a powerful purgative effect, but when taken in smaller amounts they appear to aid absorption from the gut, are potent antimicrobial agents and possess powerful analgesic effects. They also reduce the formation of melanin and any tendency to hyper-pigmentation. Lignin with their penetrative ability facilitates to carry other active ingredients deep into the skin to nourish the dermis. Aloe vera extracts when consumed (150 mg/kg and 300 mg/kg) respectively for 5 days, there was a significant increase in the total white blood cell count and macrophages with the engulfed SRBC with increase in concentration. This shows the immunomodulatory property of the extract.

Davis (1997) in his experiment sees a promising role for this natural broad spectrum healing plant because of its immunomodulatory properties can also act as an immune stimulant. Acemannan, a chemical compound found in Aloe vera acts as a powerful immunostimulant in animals, particularly in cats.

The Aloe vera gel polysaccharide can boost the working of the macrophages in the intestines allowing the immune system to improve the activity of T-Lymphocytes by up to 50 per cent for penetrate the bad bacteria, viruses, tumor cells and various pathogens.

Aloe vera in arthritis

Aloe vera juice plays a very important role in treating arthritis patients. Aloe juice is a stimulant to the immune system due to presence of different enzymes. It is a powerful anti-inflammatory agent, analgesic, is able to speed up cell growth, thus it repairs arthritis damaged tissue. Aloe vera juice when taken orally and applied externally helps in repair process by regenerating cell and detoxifying the affected area. Aloe vera is believed to reduce severe joint and muscle pain associated with arthritis, as well as pain related to tendinitis and injuries. When applied directly to the area of pain, Aloe vera penetrates the skin to soothe the pain. Studies have also found that ingestion of Aloe vera on a daily basis can help prevent and cause a regression of adjuvant arthritis.

Aloe vera fights stress

In the modern scenario many people suffer from stress. Today's fast stressful life causes some bio- chemical and physiological changes in the body, making us susceptible to diseases and dysfunction of organ systems. Aloe juice is helpful in smooth functioning of the body machinery. It reduces cell-damaging process during stress condition and minimizes bio-chemical and physiological changes in the body. Oxidative stress refers to chemical reactions in which compounds have their oxidative state changed. In the simplest case, oxidation describes the loss of electrons by a molecule, which then becomes what are termed as free radicals. This result in a pro oxidative shift in cellular balance which has been implicated in the cause of many serious diseases, including cancer, cardiovascular diseases such as hypertension and artherosclerosis, neurodegenerative diseases such as Parkinson's disease and Alzheimer's dementia, diabetes, ischemia/reperfusion injuries, rheumatoid arthritis, and even the process of aging. However, nature has evolved elegant regulatory mechanisms for countering this free radical damage. These primarily involve antioxidant reducing agents that can slow or stop oxidation reaction. Some antioxidants are part of the body's natural regulating machinery while other dietary antioxidants are derived from diet sources. Aloe vera is an excellent example of a functional food that plays a significant role in protection from oxidative stress.

Aloe vera and cancer

Aloe vera juice enables the body to heal it self from cancer and also from the damage caused by radio and chemotherapy that destroys healthy immune cells crucial for the recovery. Aloe vera acts as radiation protectors and inhibits testicular damage from gamma radiation and reduces cancer. Aloe vera leaf contains anthraquinones, saccharides, vitamin E and C, zinc, enzymes, acetyl salicylic and others. Acemannan is the major carbohydrate fraction obtained from Aloe vera leaf. This fraction promotes wound healing, has antiviral, anticancer and immune stimulation effect. Compounds extracted from Aloe vera have been used as an immunostimulant that aids in fighting cancers in cats and dogs. Aloe vera emodin, an anthraquinone, has the ability to suppress or inhibit the growth of malignant cancer cells making it to have antineoplastic properties.

Aloe vera and diabetes

Type II diabetes is one of the leading causes of death worldwide. Studies have shown that diabetics appear to have decreased antioxidant defense capability with lower levels of specific antioxidants such as vitamin C and E or reduced activities of antioxidant enzymes. Researchers have found that aloe plant polysaccharides have the
potential to control blood sugar, stimulate the body's own antioxidant production and even lower cholesterol. It lowers glucose and tri-glycoside levels in diabetic patients. Aloe polysaccharides improve the property of immune cells and are also very effective to eliminate waste and other toxins. Aloe vera juice enhances absorption of nutrients and maintains the sugar balance in blood by improving digestive functioning. Aloe vera may enhance the action of the drugs or herbal preparations used with insulin for a diabetic. Aloe vera extracts may be useful in the treatment of wound and burn healing, minor skin infections, sebaceous cyst, diabetes, and elevated blood lipids in humans.

**Aloe vera and hepatitis**

Oral use of aloe juice helps in maintaining and restoring stomach acid balance, beneficial for liver, helps in recovery of chronic hepatitis patients. In addition to topical use in wound or burn healing, internal intake of Aloe vera has been linked in preliminary research with improved blood glucose levels in diabetics, with lower blood lipids in hyperlipidaemic patients and it is also associated with acute hepatitis (liver disease). The fresh juice obtained from the cut bases of the leaves is cathartic and cooling and used to treat liver, spleen and muscular pain.

**Aloe vera in heart disease**

Aloe vera juice taken by angina pectoris patient’s results in marked reduction of serum cholesterol and triglycosides levels and increases HDL levels. Researchers have found that Aloe vera easily stimulates the fibroblasts for making new tissues. When fibroblasts are stimulated, proteoglycans, collagens are formed and thus risk of cardiovascular disorders decreases. However, studies suggest that the ingestion of Aloe vera gel may have a beneficial effect to the accumulation of blood lipids associated with the disease. Test groups given Aloe vera showed a decrease in total cholesterol, triglyceride, phospholipids and nonesterified fatty acid levels, each of which, when elevated, seem to accelerate the accumulation of fatty material in large and medium sized arteries, including the coronary arteries of the heart.

**Aloe vera and AIDS**

Acemannan present in Aloe vera juice is having anti-viral and immune-modulating properties. A daily dose of minimum 1200 mg of active ingredients of Aloe vera showed substantial improvement in AIDS symptoms. Its healing powers extend to soothing internal wounds and burns such as the damage done to the internal organs by high-potency drugs of AIDS. Aloe vera contains glucosmannan, a special complex polysaccharide composed largely of the sugar mannose. It interacts with special cell-surface receptors on those cells which repair damaged tissues, called fibroblasts, stimulating them, activating their faster growth and replication. An extract of mannose, one of the sugars in Aloe vera can inhibit HIV-1, the virus associated with AIDS. Researchers found that Aloe vera stimulates the body’s immune system, particularly T4 helper cells – white blood cells that activate the immune response to infection. The medicinal uses of Aloe vera extend to protection against radiation burns. Acemannan improves cellular metabolism by normalizing cellular function and regulating the flow of nutrients and wastes in and out of the cells. In some AIDS patients, it even protected the immune system from the toxic side effects of AZT. Carrington Laboratories in the United States have separated the acemannan from Aloe vera. The product is sold as "Carrisyn" and is being used for treatment of AIDS and Feline leukemia.

**BEAUTY CARE PROPERTIES**

Aloin and its gel are used as skin tonic against pimples. Aloe vera is also used for soothing the skin, and keeping the skin moist to help avoid flaky scalp and skin in harsh and dry weather. Aloe vera may also be used as a moisturizer for oily skin. Studies show that Aloe vera improves the skin’s ability to hydrate itself, aids in the removal of dead skin cells and has an effective penetrating ability that helps transport healthy substances through the skin. Each of these factors makes Aloe vera an ideal ingredient in cosmetic and dermatological products. In fact, Aloe vera is currently one of the most important ingredients in the cosmetics industry, being utilized in over 95 per cent of the dermatologically valuable extracts manufactured worldwide. The aloe sugars are also used in moisturizing preparations. Mixed with selected essential oils, it makes an excellent skin smoothening moisturizer, sun block lotion plus a whole range of beauty products. Due to its soothing and cooling qualities, Maharishi ayurveda recommends Aloe vera for a number of skin problems. Aloe vera extracts have antibacterial and antifungal activities, which may help in the treatment of minor skin infections, such as boils and benign skin cysts and have been shown to inhibit the growth of fungi that cause tinea.

**COMMODITY USE**

The leaves of Aloe are also eaten as vegetable. Pickled made by small pieces of leaf pad is a common preparation in western Rajasthan. The immature flower stalk that are completely free from bitter content, are also used for vegetable purpose. Fresh fleshy leaf pad is a part of green salad and helpful in treatment of indigestion and constipation. Sharma and Goel (2002) standardized the recipes of various aloe product viz., vegetable, pickles, laddo, jam, squash, biscuits and churna by using sensory evaluation technique. Saroj and Purohit (2004) standardized the recipe for preparation of some culinary products from sweet type Aloe (Aloe barbadensis). It helps to cure diabetes, ulcer, and heart disease. Now a day’s Aloe vera juice is available in the market to enhance immune response against various diseases. Besides juice, Aloe vera leaf powder is also being used by food processing industries in preparation of yoghurt and other food products. The gel is most commonly used part of
the plant which has been processed and used in different products. Today, the industry is flourishing and gel is being used as fresh gel juice. Besides its medicinal values this plant contains a number of nutrients such as vitamins, minerals, amino acids, sugars, enzymes, fatty acids and saponins, which have the positive effect on human body. It has also been suggested that bio-fuels could be obtained from Aloe vera seeds. It is common practice for cosmetic companies to add sap or other derivatives from Aloe vera to products such as makeup, tissue papers, moisturizers, soaps, sunscreens, incense, shaving cream, and shampoos. Traditionally, aloe is extensively used for medicinal purpose particularly for urine related problems, pimples and ulcers. Aloe and its gel are used as skin tonic and have a cooling and moisturizing effects so it is used in preparation of creams, lotions, shampoos and allied products.

Aloe contents of different market products:

- Sunburn treatments- 20 per cent or more aloe content
- Creams and Ointments- 20 per cent or more aloe content
- Juice- 95 per cent or more aloe content
- Beverages- 50 per cent or more aloe content
- Drinks- 10 per cent or more aloe content
- Capsules- 5-10 per cent or more aloe content

CONCLUSION

Hence there is no wonder in considering Aloe vera as the ‘Wonder plant’. It’s uses are multiple - from being an antiseptic, anti-inflammatory agent, a curing agent for heart problems, helps in relieving the symptoms of severe illnesses like cancer and diabetes, being a beauty enhancer and improves health. This Ancient Indian herb has been known from centuries for its unique medicinal properties, but now it has been rediscovered, recognized and is benefiting the people. The active ingredients hidden in its succulent leaves have the power to soothe human life and health in a myriad ways. Aloe vera is undoubtedly, the nature’s gift to humanity and it remains for us to introduce it to ourselves and thank the nature for its never-ending gift.

REFERENCES
